Request Information
Request Description
The system will provide users with a feature to view available tables in the café and place orders by scanning QR codes located at their tables, allowing them to see which tables are vacant, make informed decisions about where to sit, and quickly access the menu for dine-in or takeout options.
Justification
The ability for users to view available tables and place orders by scanning QR codes enhances the dining experience by providing convenience and efficiency. This feature allows customers to make informed decisions about seating and access the menu quickly, promoting a seamless dining experience for both dine-in and takeout options.
Effect if declined (Risk if the project request is declined)
If this requirement is declined, customers may face difficulties in finding available seating and accessing the menu, leading to frustration and a less enjoyable experience. The lack of a streamlined ordering process could result in longer wait times and decreased customer satisfaction, ultimately affecting the café's reputation and patronage.
