Request Information
Request Description
Users must have access to both email and password-based sign-up and sign-in options. Additionally, the system should allow students to sign in using their student ID cards, providing special discounts and offers exclusively for students.
Justification
Offering both email/password and student ID card login options enhances accessibility and convenience for users. The student ID card feature allows for easy authentication and enables the system to provide exclusive discounts, promoting student engagement and improving user satisfaction.
Effect if declined (Risk if the project request is declined)
Declining this requirement may reduce user accessibility and satisfaction, leading to lower engagement rates. Without multiple login options, users might abandon the sign-up process, and the lack of student discounts could diminish the app's appeal to students.
