| Request Information |
|---|
| Request Description |
| A page displaying available food and drink items will be accessible to users, featuring images, prices, and descriptions of each item to enhance the browsing experience. Additionally, the system will provide detailed information about ingredients and allergen warnings for each menu item to promote safe consumption. |
| Justification |
| A dedicated page for food and drink items enhances the user browsing experience by providing images, prices, and descriptions, aiding customers in making informed choices. Including detailed information about ingredients and allergen warnings promotes safe consumption, increasing customer trust and satisfaction. |
| Effect if declined (Risk if the project request is declined) |
| Declining this requirement may result in customers struggling to find essential information, leading to frustration and potential safety risks. Without allergen warnings, the risk of allergic reactions increases, which could damage the restaurant's reputation and result in legal issues. |
